Index of subjects

Adhesion of particulate specimens to support films, 211
Adhesives, suitability of, as mounting media for SEM, 289
Alum, gallocyanin-chrome, as an electron stain, 253
Amphibolite, characterization of metamorphic textures, from a micrograph of, 111
Amylase crystals, spatially filtered images of, 201

Banding, chromosome, recording of, 531
Beam current measurement in the electron microscope, 141

Cell colonies, adaptation of a stereomicroscope to scan, 225
Cell cultures grown as monolayers, freeze-fracture of, 229
Cell cultures, monolayer, without chemical pretreatments, 149
Cells, leaf, sodium localization in, 179
Cell shrinkage, method to avoid, 185
Chromosome banding, recording of, with a scanning microdensitometer, 351
Chromatin particles, surface properties of support films, 211
Collagen, dermal, apparatus to freeze-fracture, 347
Critical point dried cells, surface labelling of, 239
Cryofixation of monolayer cell cultures, 149

Dark ground illumination, use of, to determine 3-D form of flagella, 241

Electron beam current measurement, 141
Electron diffraction study of storage granules, 133
Electron stain, gallocyanin-chrome allum as an, 253
Emulsions, micro-, 169
Environmental scanning electron microscope, 235
Error, measuring, in stereology, 75
Euglena gracilis, study of paramylon storage granules, 133

Flagella, active, 3-D form of, 241
Film, spectroscopic, use of, for flourescence microscopy, 357
Fluorescein isothiocyanate, for labelling of cell colonies, 225
Fluorescence microscopy, use of spectroscopic film for, 357
Formulae, stereological, based on planar curve sections, 21
Fractal dimensions, interpretation of resolution effect, 51
Freeze-fracture without chemical pretreatments, 149
Freeze-fracture of cell cultures grown as monolayers, 229
Freeze-fracture replica preparation, modification on, 239
Freeze-fracture of root slices, 245
Freezing effects and their restoration, 191
Freezing, quench-, rapid, device for, 273

Geodesic metric in image analysis, use of, 39
Geotextiles, non-woven, prediction of permeability of, 99
Granules, paramylon storage, 133

Ice crystal damage in frozen thin sections, 191
Image analysis, use of geodesic metric in, 39
Image analyser video scanners, 337
Images, spatially filtered, of *B. subtilis* α-amylase crystals, 201
Inflection point count, stereological meaning of, 13

Leeuwenhoek, Antoni van, microscopes of, 309
Linearity, checking of, of the photoelectron system of a microscope photometer, 222
Lung, rat, automated pattern analysis, 119

Mammalian tissue for EM and X-ray microprobe analysis, 261
Microdensitometry with image analyser video scanners, 337
Micro-emulsions and electron microscopy, 169
Microprobe analysis, estimation of surface labelling, 329
Monolayers, freeze-fracture of cell cultures grown as, 229
Morphological analysis of sintering, 89
Morphometry analysis, prediction of permeability, 99

Paramylon storage granules, 133
Pattern analysis, automated, of growing rat lung, 119
Permeability, prediction for, of non-woven geotextiles, 99
Phases in a material, interspersion of, 3
Photometer, microscope, checking linearity of, 222
Planar curve sections of surfaces in space, formulae based on, 21
Planar image analysis, efficiency of various methods for 75
Plant material, living, study of in an environmental SEM, 235
Point count, inflection, stereological meaning of, 13

Electron beam current measurement, 141
Electron diffraction study of storage granules, 133
Electron stain, gallocyanin-chrome allum as an, 253
Emulsions, micro-, 169
Environmental scanning electron microscope, 235
Error, measuring, in stereology, 75
Euglena gracilis, study of paramylon storage granules, 133

Flagella, active, 3-D form of, 241
Film, spectroscopic, use of, for flourescence microscopy, 357
Fluorescein isothiocyanate, for labelling of cell colonies, 225
Fluorescence microscopy, use of spectroscopic film for, 357
Formulae, stereological, based on planar curve sections, 21
Fractal dimensions, interpretation of resolution effect, 51
Freeze-fracture without chemical pretreatments, 149
Freeze-fracture of cell cultures grown as monolayers, 229
Freeze-fracture replica preparation, modification on, 239
Freeze-fracture of root slices, 245
Freezing effects and their restoration, 191
Freezing, quench-, rapid, device for, 273

Geodesic metric in image analysis, use of, 39
Geotextiles, non-woven, prediction of permeability of, 99
Granules, paramylon storage, 133

Ice crystal damage in frozen thin sections, 191
Image analysis, use of geodesic metric in, 39
Image analyser video scanners, 337
Images, spatially filtered, of *B. subtilis* α-amylase crystals, 201
Inflection point count, stereological meaning of, 13

Leeuwenhoek, Antoni van, microscopes of, 309
Linearity, checking of, of the photoelectron system of a microscope photometer, 222
Lung, rat, automated pattern analysis, 119

Mammalian tissue for EM and X-ray microprobe analysis, 261
Microdensitometry with image analyser video scanners, 337
Micro-emulsions and electron microscopy, 169
Microprobe analysis, estimation of surface labelling, 329
Monolayers, freeze-fracture of cell cultures grown as, 229
Morphological analysis of sintering, 89
Morphometry analysis, prediction of permeability, 99

Paramylon storage granules, 133
Pattern analysis, automated, of growing rat lung, 119
Permeability, prediction for, of non-woven geotextiles, 99
Phases in a material, interspersion of, 3
Photometer, microscope, checking linearity of, 222
Planar curve sections of surfaces in space, formulae based on, 21
Planar image analysis, efficiency of various methods for 75
Plant material, living, study of in an environmental SEM, 235
Point count, inflection, stereological meaning of, 13

Polyvinyl alcohol coating, improvement of freeze-fracture technique, 283
Pretreatments, freeze-fracture without chemical, 149

Quench-freezing, rapid, device for, 273

Rat lung, growing, automated pattern analysis of, 119
Replica preparation, freeze-fracture, modification for, 239
Resolution effect on stereological estimation of surface and volume 51
Root slices, examined after freeze-fracture and thaw-fixation, 245

Sampling efficiency of stereological studies optimization of, 65
Scanning electron microscopy, adhesives for, suitability of, 289
dermal collagen, apparatus to freeze-fracture, 347
environmental, study of fresh or living plant material in, 235
preparation method to avoid cell shrinkage, 185
surface labelling of cells, 329
Sintering, morphological analysis of, 89
Sodium localization in leaf cells, 179
Statistical method to reveal non-random location of an organelle, 29
Space, planar curve sections of surfaces in, 21
Spatial organization of the cell, analysis of 29
Spectroscopic film, use of, for fluorescence microscopy, 357
Stereology, measuring error and sampling variation in, 75
Stereological estimation of surfaces and volume, 51
Stereological formulae based on planar curve sections, 21
Stereological meaning of the inflection point, count, 13
Stereological studies, sampling efficiency of, 65
Stereomicroscope, adaptation of a low power, to scan cell colonies, 225
Support films, surface properties of, 211
Surface labelling, on CPD cells, 329
Surface, resolution effect on 51

Textures, metamorphic, characterization of, analysis from a micrograph, 111
Thaw fixation of root slices, 245

Vicia faba root slices, after freeze-fracture and thaw-fixation, 245
Vickers M85/M86, canning microdensitometer, 351
Video scanners, image analysers, 337
Volume, resolution effect on the stereological estimation of, 51

X-ray microprobe analysis, preparation of a frozen hydrated tissue for, 261

Zinc uranyl acetate precipitation, sodium localization, using, 179
